Instructor Setup

Step 1: Login and Navigator

After logging in, you see the Navigator. As a new instructor with no units configured, it will be empty.

Step 2: Creating a Unit

Navigate to Units and create a new unit for your class.

Enter the unit code, name, and semester, then click Create.

Step 3: Adding a Week

Create a week by entering the week number and title.

Publish the week to make it visible to students.

Step 4: Creating an Activity

Create an activity within the week. Students will create workspaces from this activity.

Step 5: Configuring Tags in the Template

Each activity has a **template workspace** (shown with a purple chip) that holds the canonical tag configuration. When students start the activity, they receive a cloned **instance workspace** (blue chip) that inherits the template's tags.

Navigate to Unit Settings and click the template button to open the template workspace directly.

Configure tag groups and tags. Students' workspaces will inherit this tag configuration.

Step 6: Enrolling Students

Navigate to the unit's enrollment page to add students.

Add student email addresses to enrol them in the unit. Students will see the unit and its activities on their Navigator after enrolment.

Step 7: Verifying the Student View

Re-authenticate as a student to verify the activity is visible.

The student can see the unit and activity on their Navigator. They can click

Start to create a workspace.
